Decision Tree for PantryPal

For my decision tree, I make one that recommends recipes based on the ingredients that the user has. The website is going to check for different ingredients and recommend a meal for the user

- Node 1: Do you have Bread?
  - Yes: Ask if the user has cheese
  - No: Ask if you have flour
- Node 2: Do you have Cheese?
  - Yes: Recommend a grilled cheese because you have the ingredients for it
  - No: Message showing you need cheese to make a grilled cheese
- Node 3: Do you have flour?
  - Ask if the user has tomatoes and cheese
  - No: No matching recipes were found
- Node 4: Do you have tomatoes and cheese?
  - Yes: Recommend pizza because the user has the ingredients
  - Message showing the missing ingredients for the pizza

Do you have bread?
yes
no
do you have cheese
Do you have flour?
yes
no
yes
no
Grilled Cheese
Need cheese for grilled cheese
no recipes at this time
