

1. Which type of ideas do you think apply to Shyp? Why?

It applies to simplify because it makes the process of shipping easier by just sending a picture and they take care of the rest. Virtualize somewhat applies as well where instead of you going to the post office and doing all the packing, shyp does that for you

2. Which type of ideas do you think apply to Curofy? Why?

It applies to remix. Its like linkedin and takes a little twist on it and makes it space for doctors in india. Me too as well since its taking the idea of linkedin and moving a similar idea to india

3. Use [Product Hunt](https://www.producthunt.com/products/tiun-2) to find a relatively new startup and respond to the following about it: <https://www.producthunt.com/products/tiun-2>

- Describe the idea. **Its authentication, payments , billing and analytics all in one**
- Describe the type(s) of ideas that apply to it. **Simplify fits it. It takes different type backend payment stuff and puts it into one program. It would also fit for remix a bit for the same reason**
- Is the idea a painkiller or a vitamin? That is, does the idea address users' needs or emotions? **Why? Its a painkiller. It eliminates the struggle of implementing all that stuff and makes it easier to implement.**
- Is the idea easy to monetize? **Yes i dont think it would go for a lot of money but if you sold it in a package for like 20-50 buck it would be good**
- Is the idea simple and easy to describe? **Yea you can say it stripe+clerk+billing engine+ analytic dashboard in one program**
- Is the idea personally relevant? Are you or is someone close to you connected to the idea or the related problem? **Back in csc305 my group did a college market place and for us the hardest part was implementing the payment system so if we had this back then it would've saved us a lot of time**
- Does the idea have a large market? **I would say it does, this makes things a lot easier for the back off shop websites so people would want it**
- Does the idea have a legitimate secret sauce? **Not really. Its just taking stuff that already exists and bundling up into one**

A. Brainstorming

Answer the following questions in your document:

1. Brainstorm ideas of problems you want to solve with software like an app or website. Include all the problems you came up with in your document.

You are hungry but you don't know what to make with what your already have but don't want to go out and get food

I hate having to go between different media (tv, movie,music) rating/discussing website to put in my thoughts and then go to another one to do the same thing

2. Brainstorm ways to solve the problems. Include all the solutions you came up with in your document.

Have a way to store all types of ingredients or pick certain ingredients you think would go together nice and ask a website what these ingredients can make

put multiple media types into one website where you can rate and make discussing threads about what you want to talk about

3. Choose one of your ideas as your product that you will turn into a website for this course. Why did you pick this idea over the other candidates?

Probably the food one since it can maybe make some money and the media one may be too chaotic

4. Is your idea a new one or has it existed before?

I believe its been done before

5. What industry would your idea be useful in? Why? (i.e., advertising, apparel, arts, automotive, cosmetics, education, entertainment, food, etc.)

In food

B. Product Proposal

Answer the following questions in your document:

1. Describe the product you have come up with and the type(s) of ideas that apply to it. **So the product would be a website where you can put all your ingredients that you have or certain ingredients that may be good together then it would search through the web and find the top rated recipes with**

those ingredients. Type of idea that fits this is me too since I believe that there are some websites/app that do this.

2. How is your product personally relevant to you? Are you or is someone close to you connected to the idea or the related problem? **Right now I am trying to get stuff out my fridge and I think that certain combinations of food might be weird together so having website that could give some recommendations would be nice**
3. What problem will your product solve? **Fixes the problem of where you are hungry but don't know what to eat**
4. What type of website will your product be? (i.e., blog, business, brochure, etc.) **it would be a web app**
5. Is your product a painkiller or a vitamin? That is, does it address users' needs or emotions? Why? **Painkiller because it would save money and stop food waste.**
6. Is your product easy to monetize? **Maybe you could make premium tier that where you can m**
7. **eal plan or you can nutrition track**
8. Is your product simple and easy to describe? **Yea just tell the app what you have and it would give you recommendations**
9. Who will be the likely users of your product? **Does your product have a large market? Budget conscious people, students, people not trying to waste food. I think its a big market**
10. Does your product have a legitimate secret sauce? **Not really since there are other apps alike**
